Shelf life is the length of time that a commodity may be stored without becoming unfit for use, consumption, or sale. In other words, it might refer to whether a commodity should no longer be on a pantry shelf (unfit for use), or no longer on a supermarket shelf (unfit for sale, but not yet unfit for use). It applies to cosmetics, foods and beverages, medical devices, medicines, explosives, pharmaceutical drugs, chemicals, tyres, batteries, and many other perishable items. The concept of expiration date is related but legally distinct in some jurisdictions.

Calibre (musician)

Dominick Martin, better known by his stage name Calibre, is a Northern Irish drum and bass music producer and DJ from Belfast. He is highly regarded for his influence on the liquid funk style of drum and bass, which was partially named after his distinct production style. He primarily releases his own works through his personal label, Signature Recordings, but has also released on labels such as Hospital Records, V Recordings, Creative Source and Soul:R.

Many of his productions—some of which were unreleased at the time—became synonymous with liquid funk due to DJ Fabio playing most of Martin's productions on his BBC Radio 1 show, Liquid Funk, and at Swerve club nights (originally known as Speed, which was co-ran with LTJ Bukem) in the early 2000s. Beginning in 2007, some of these unreleased productions would be released under the "Shelflife" series of albums alongside other works by Martin on his personal record label, Signature Records.

According to UKF, none of Martin's productions have been officially remixed by other artists.

In 2019, Martin was awarded Critics Choice in the Drum&BassArena Awards 2019.

A preservative is a substance or a chemical that is added to products such as food products, beverages, pharmaceutical drugs, paints, biological samples, cosmetics, wood, and many other products to prevent decomposition by microbial growth or by undesirable chemical changes. In general, preservation is implemented in two modes, chemical and physical. Chemical preservation entails adding chemical compounds to the product. Physical preservation entails processes such as refrigeration or drying. Preservative food additives reduce the risk of foodborne infections, decrease microbial spoilage, and preserve fresh attributes and nutritional quality. Some physical techniques for food preservation include dehydration, UV-C radiation, freeze-drying, and refrigeration. Chemical preservation and physical preservation techniques are sometimes combined.
