A3: BEER should be stored in a chilled, shaded location away from direct radiation to avoid degradation.

The method of BEER production involves a number of carefully managed stages. First, grains, usually barley, are germinated to initiate enzymes that transform the carbohydrate into fermentable sugars. This germinated grain is then mixed with hot water in a technique called blending, which extracts the sugars. The produced liquid, known as extract, is then boiled with bitter to add flavor and preservation.

After heating, the extract is cooled and inoculated with ferment. The yeast transforms the sugars into alcohol and carbon. This fermentation takes several days, and the produced beer is then aged, filtered, and canned for consumption.
