

14 As A Grade

Listed building

buildings under three grades, with Grade I being the highest grade, as follows: Grade I: buildings that are of exceptional interest Grade II: particularly*

In the United Kingdom, a listed building is a structure of particular architectural or historic interest deserving of special protection. Such buildings are placed on one of the four statutory lists maintained by Historic England in England, Historic Environment Scotland in Scotland, Cadw in Wales, and the Historic Environment Division of the Department for Communities in Northern Ireland. The classification schemes differ between England and Wales, Scotland, and Northern Ireland (see sections below). The term has also been used in the Republic of Ireland, where buildings are protected under the Planning and Development Act 2000, although the statutory term in Ireland is "protected structure".

A listed building may not be demolished, extended, or altered without permission from the local planning authority, which typically consults the relevant central government agency. In England and Wales, a national amenity society must be notified of any work to be done on a listed building which involves any element of demolition.

Exemption from secular listed building control is provided for some buildings in current use for worship, but only in cases where the relevant religious organisation operates its own equivalent permissions procedure. Owners of listed buildings are, in some circumstances, compelled to repair and maintain them and can face criminal prosecution if they fail to do so or if they perform unauthorised alterations. When alterations are permitted, or when listed buildings are repaired or maintained, the owners are often required to use specific materials or techniques.

Although most sites appearing on the lists are buildings, other structures such as bridges, monuments, sculptures, war memorials, milestones and mileposts, and the Abbey Road zebra crossing made famous by the Beatles, are also listed. Ancient, military, and uninhabited structures, such as Stonehenge, are sometimes instead classified as scheduled monuments and are protected by separate legislation. Cultural landscapes such as parks and gardens are currently "listed" on a non-statutory basis.

Grading systems by country

This is a list of grading systems used by countries of the world, primarily within the fields of secondary education and university education, organized

This is a list of grading systems used by countries of the world, primarily within the fields of secondary education and university education, organized by continent with links to specifics in numerous entries.

Grade (climbing)

routes have grades for the technical difficulty, and in some cases for the risks, of the route. The first ascensionist can suggest a grade but it will

Many climbing routes have grades for the technical difficulty, and in some cases for the risks, of the route. The first ascensionist can suggest a grade but it will be amended for the consensus view of subsequent ascents. While many countries with a tradition of climbing developed their own grading systems, a small number of grading systems have become internationally dominant for each type of climbing, and which has led to the standardization of grading worldwide. Over the years, grades have consistently risen in all forms of climbing, helped by improvements in climbing technique and equipment.

In free climbing (i.e. climbing rock routes with no aid), the most popular grading systems are the French numerical or sport system (e.g. f7c+), the American YDS system (e.g. 5.13a), and latterly the UIAA scale (e.g. IX+). These systems grade technical difficulty being the main focus of the lower-risk activity of sport climbing. The American system adds an R/X suffix to traditional climbing routes to reflect the additional risks of climbing protection. Notable traditional climbing systems include the British E-grade system (e.g. E4 6a).

In bouldering (i.e. rock climbing on short routes), the popular systems are the American V-scale (or "Hueco") system (e.g. V14), and the French "Font" system (e.g. 8C+). The Font system often attaches an "F" prefix to further distinguish it from French sport climbing grades, which itself uses an "f" prefix (e.g. F8C+ vs. f8c+). It is increasingly common for sport-climbing rock-routes to describe their hardest technical movements in terms of their boulder grade (e.g. an f7a sport climbing route being described as having a V6 crux).

In aid climbing (i.e. the opposite of free climbing), the most widely used system is the A-grade system (e.g. A3+), which was recalibrated in the 1990s as the "new wave" system from the legacy A-grade system. For "clean aid climbing" (i.e. aid climbing equipment is used but only where the equipment is temporary and not permanently hammered into the rock), the most common system is the C-system (e.g. C3+). Aid climbing grades take time to stabilize as successive repeats of aid climbing routes can materially reduce the grade.

In ice climbing, the most widely used grading system is the WI ("water ice") system (e.g. WI6) and the identical AI ("alpine ice") system (e.g. AI6). The related sport of mixed climbing (i.e. ice and dry-tool climbing) uses the M-grade system (e.g. M8), with other notable mixed grading systems including the Scottish Winter system (e.g. Grade VII). Pure dry-tooling routes (i.e. ice tools with no ice) use the D-grade prefix (e.g. D8 instead of M8).

In mountaineering and alpine climbing, the greater complexity of routes requires several grades to reflect the difficulties of the various rock, ice, and mixed climbing challenges. The International French Adjectival System (IFAS, e.g. TD+)—which is identical to the "UIAA Scale of Overall Difficulty" (e.g. I–VI)—is used to grade the "overall" risk and difficulty of mountain routes (with the gradient of the snow/ice fields) (e.g. the 1938 Heckmair Route on the Eiger is graded: ED2 (IFAS), VI? (UIAA), A0 (A-grade), WI4 (WI-grade), 60° slope). The related "commitment grade" systems include the notable American National Climbing Classification System (e.g. I–VI).

Academic grading in the United States

United States, academic grading commonly takes on the form of five, six or seven letter grades. Traditionally, the grades are A+, A, A?, B+, B, B?, C+, C,

In the United States, academic grading commonly takes on the form of five, six or seven letter grades. Traditionally, the grades are A+, A, A?, B+, B, B?, C+, C, C?, D+, D, D? and F, with A+ being the highest and F being lowest. In some cases, grades can also be numerical. Numeric-to-letter-grade conversions generally vary from system to system and between disciplines and status.

Educational stage

Quebec), followed by grades, with some variations for certain levels in certain provinces/territories. When referred to as a grade, school years are usually

Educational stages are subdivisions of formal learning, typically covering early childhood education, primary education, secondary education and tertiary education. The United Nations Educational, Scientific and Cultural Organization (UNESCO) recognizes nine levels of education in its International Standard Classification of Education (ISCED) system (from Level 0 (pre-primary education) through Level 8 (doctoral)). UNESCO's International Bureau of Education maintains a database of country-specific education systems and their stages. Some countries divide levels of study into grades or forms for school children in the

same year.

Grading in education

Grading in education is the application of standardized measurements to evaluate different levels of student achievement in a course. Grades can be expressed

Grading in education is the application of standardized measurements to evaluate different levels of student achievement in a course. Grades can be expressed as letters (usually A to F), as a range (for example, 1 to 6), percentages, or as numbers out of a possible total (often out of 100). The exact system that is used varies worldwide.

Eighth grade

eighth grade are usually 13–14 years old. Different terms and numbers are used in other parts of the world. In the United States, 8th grade is usually a child's

Eighth grade (also 8th Grade or Grade 8) is the eighth year of formal or compulsory education in the United States of America. The eighth grade is the second, third, or fourth (and typically final) year of middle school. Students in eighth grade are usually 13–14 years old. Different terms and numbers are used in other parts of the world.

Eighth Grade (film)

Eighth Grade is a 2018 American coming-of-age comedy drama film written and directed by Bo Burnham in his feature-length directorial debut. It stars Elsie

Eighth Grade is a 2018 American coming-of-age comedy drama film written and directed by Bo Burnham in his feature-length directorial debut. It stars Elsie Fisher as Kayla, a teenager attending middle school who struggles with anxiety but strives to gain social acceptance from her peers during their final week of eighth grade. She copes by publishing vlogs as a self-styled motivational guru but spends much of her time obsessing over social media, frustrating her otherwise supportive father Mark (Josh Hamilton), whom she alienates despite his wish to be present in her life as her sole parent.

Burnham began writing the screenplay in 2014, initially in an attempt to reflect on his own anxiety and onstage panic attacks he experienced during his career in stand-up comedy. Deciding to convey his experience through Kayla, he also wanted to explore how her generation copes with mental illness, grows up with the presence of social media, navigates sexuality and consent, relates to their parents and develops their sense of self. Burnham aimed for realism, casting actual eighth graders—including Fisher—who informed his script and directing. For research, he watched vlogs from teenagers on YouTube, where he also discovered Fisher. On a budget of \$2 million, production took place in 2017 in Suffern, New York.

Eighth Grade premiered at the Sundance Film Festival on January 19, 2018. It was given wide theatrical release in the United States by A24 on July 13, 2018. Instead of appealing the Motion Picture Association of America's R (Restricted) rating of the film, A24 and Burnham arranged free all-ages theatrical screenings in every U.S. state to let their intended audience see it.

The film was a critical and commercial success, grossing \$13.5 million domestically. The filmmakers won many awards and nominations, with Burnham winning both Writers Guild and Directors Guild of America Awards, and Fisher nominated for a Golden Globe for Best Actress and winning the Gotham Award for Breakthrough Actor. At year's end, the National Board of Review and the American Film Institute each chose Eighth Grade as one of the 10 best films of 2018, with the former also naming it the year's best directorial debut.

Grade (slope)

The grade (US) or gradient (UK) (also called slope, incline, mainfall, pitch or rise) of a physical feature, landform or constructed line is either the

The grade (US) or gradient (UK) (also called slope, incline, mainfall, pitch or rise) of a physical feature, landform or constructed line is either the elevation angle of that surface to the horizontal or its tangent. It is a special case of the slope, where zero indicates horizontality. A larger number indicates higher or steeper degree of "tilt". Often slope is calculated as a ratio of "rise" to "run", or as a fraction ("rise over run") in which run is the horizontal distance (not the distance along the slope) and rise is the vertical distance.

Slopes of existing physical features such as canyons and hillsides, stream and river banks, and beds are often described as grades, but typically the word "grade" is used for human-made surfaces such as roads, landscape grading, roof pitches, railroads, aqueducts, and pedestrian or bicycle routes. The grade may refer to the longitudinal slope or the perpendicular cross slope.

Ninth grade

in ninth grade are usually 14-15 years old. In Afghanistan, ninth grade is the third year of secondary school, which starts in seventh grade. Under the

Ninth grade (also 9th or Grade 9) is the ninth year of formal or compulsory education in some countries. It is generally part of middle school or secondary school depending on country. Students in ninth grade are usually 14-15 years old.
