Climate change

effects on Earth's climate system. Climate change in a broader sense also includes previous long-term changes to Earth's climate. The current rise in global

Present-day climate change includes both global warming—the ongoing increase in global average temperature—and its wider effects on Earth's climate system. Climate change in a broader sense also includes previous long-term changes to Earth's climate. The current rise in global temperatures is driven by human activities, especially fossil fuel burning since the Industrial Revolution. Fossil fuel use, deforestation, and some agricultural and industrial practices release greenhouse gases. These gases absorb some of the heat that the Earth radiates after it warms from sunlight, warming the lower atmosphere. Carbon dioxide, the primary gas driving global warming, has increased in concentration by about 50% since the pre-industrial era to levels not seen for millions of years.

Climate change has an increasingly large impact on the environment. Deserts are expanding, while heat waves and wildfires are becoming more common. Amplified warming in the Arctic has contributed to thawing permafrost, retreat of glaciers and sea ice decline. Higher temperatures are also causing more intense storms, droughts, and other weather extremes. Rapid environmental change in mountains, coral reefs, and the Arctic is forcing many species to relocate or become extinct. Even if efforts to minimize future warming are successful, some effects will continue for centuries. These include ocean heating, ocean acidification and sea level rise.

Climate change threatens people with increased flooding, extreme heat, increased food and water scarcity, more disease, and economic loss. Human migration and conflict can also be a result. The World Health Organization calls climate change one of the biggest threats to global health in the 21st century. Societies and ecosystems will experience more severe risks without action to limit warming. Adapting to climate change through efforts like flood control measures or drought-resistant crops partially reduces climate change risks, although some limits to adaptation have already been reached. Poorer communities are responsible for a small share of global emissions, yet have the least ability to adapt and are most vulnerable to climate change.

Many climate change impacts have been observed in the first decades of the 21st century, with 2024 the warmest on record at +1.60 °C (2.88 °F) since regular tracking began in 1850. Additional warming will increase these impacts and can trigger tipping points, such as melting all of the Greenland ice sheet. Under the 2015 Paris Agreement, nations collectively agreed to keep warming "well under 2 °C". However, with pledges made under the Agreement, global warming would still reach about 2.8 °C (5.0 °F) by the end of the century. Limiting warming to 1.5 °C would require halving emissions by 2030 and achieving net-zero

emissions by 2050.

There is widespread support for climate action worldwide. Fossil fuels can be phased out by stopping subsidising them, conserving energy and switching to energy sources that do not produce significant carbon pollution. These energy sources include wind, solar, hydro, and nuclear power. Cleanly generated electricity can replace fossil fuels for powering transportation, heating buildings, and running industrial processes. Carbon can also be removed from the atmosphere, for instance by increasing forest cover and farming with methods that store carbon in soil.

Changes in Latitudes, Changes in Attitudes

Changes in Latitudes, Changes in Attitudes is the seventh studio album by American popular music singer-songwriter Jimmy Buffett. This is his breakthrough

Changes in Latitudes, Changes in Attitudes is the seventh studio album by American popular music singer-songwriter Jimmy Buffett. This is his breakthrough album, which remains the best-selling studio album of Buffett's career, and contains his biggest single, "Margaritaville". It was initially released in January 1977 as ABC AB-990 and rereleased on its successor label, MCA.

Changes was very popular and critically well-received and was a transitional album on several levels for Buffett. In a commercial sense, it ushered in Buffett's greatest period of chart and airplay popularity – changing him from an FM cult favorite and minor hitmaker to a top-draw touring artist whose albums sold in the millions, receiving regular AM airplay at the time. Changes would be followed by equally popular and more grandiose expressions of Buffett's "Caribbean Soul" on Son of a Son of a Sailor (1978) and Volcano (1979). All of these albums would combine pop, bar-band rock, country, folk, and reggae influences with the professional production of Norbert Putnam.

Forever Changes is the third studio album by the American rock band Love, released in November 1967 by Elektra Records. The album saw the group embrace a subtler folk-influenced sound based around acoustic guitars and orchestral arrangements, while primary songwriter Arthur Lee explored darker themes alluding to mortality and his growing disillusionment with the era's counterculture. It was the final album recorded by the original band lineup; after its completion, guitarist Bryan MacLean left the group acrimoniously, and Lee subsequently dismissed the other members.

Forever Changes had only moderate success on the album charts upon release, peaking at No. 154 in the US and No. 24 in the UK. In subsequent years, it has become recognized as an influential document of 1960s psychedelia and named among the greatest albums of all time by a variety of publications.

Night Changes

3:46 CD single "Night Changes" (Afterhrs Remix) – 3:40 "Night Changes" (live acoustic session) – 3:40 Music Video "Night Changes"

4:00 Peters, Mitchell - "Night Changes" is a song recorded by British-Irish boy band One Direction. It was written by the band alongside Jamie Scott, Julian Bunetta, and John Ryan, while the production was handled by Bunetta and Ryan. The song was released on 14 November 2014 as the second and final single from their fourth studio album Four. It also marked their last single with member Zayn Malik.

Istanbul

population was exempted from the 1923 population exchange with Greece, changes in tax status and the 1955 anti-Greek pogrom prompted thousands to leave

Istanbul is the largest city in Turkey, constituting the country's economic, cultural, and historical heart. With a population over 15 million, it is home to 18% of the population of Turkey. Istanbul is among the largest cities in Europe and in the world by population. It is a city on two continents; about two-thirds of its population live in Europe and the rest in Asia. Istanbul straddles the Bosphorus—one of the world's busiest waterways—in northwestern Turkey, between the Sea of Marmara and the Black Sea. Its area of 5,461 square kilometers (2,109 sq mi) is coterminous with Istanbul Province.

The city now known as Istanbul developed to become one of the most significant cities in history. Byzantium was founded on the Sarayburnu promontory by Greek colonists, potentially in the seventh century BC. Over nearly 16 centuries following its reestablishment as Constantinople in 330 AD, it served as the capital of four empires: the Roman Empire (330–395), the Byzantine Empire (395–1204 and 1261–1453), the Latin Empire

(1204–1261), and the Ottoman Empire (1453–1922). It was instrumental in the advancement of Christianity during Roman and Byzantine times, before the Ottomans conquered the city in 1453 and transformed it into an Islamic stronghold and the seat of the last caliphate. Although the Republic of Turkey established its capital in Ankara, palaces and imperial mosques still line Istanbul's hills as visible reminders of the city's previous central role. The historic centre of Istanbul is a UNESCO World Heritage Site.

Istanbul's strategic position along the historic Silk Road, rail networks to Europe and West Asia, and the only sea route between the Black Sea and the Mediterranean have helped foster an eclectic populace, although less so since the establishment of the Republic in 1923. Overlooked for the new capital during the interwar period, the city has since regained much of its prominence. The population of the city has increased tenfold since the 1950s, as migrants from across Anatolia have flocked to the metropolis and city limits have expanded to accommodate them. Most Turkish citizens in Istanbul are ethnic Turks, while ethnic Kurds are the largest ethnic minority. Arts festivals were established at the end of the 20th century, while infrastructure improvements have produced a complex transportation network.

Considered an alpha global city, Istanbul accounts for about thirty percent of Turkey's economy. Istanbul's metropolitan area is one of the main industrial regions in Turkey. In 2024, Euromonitor International ranked Istanbul as the second most visited city in the world. Istanbul is home to two international airports, multiple ports, and numerous universities. It is among the top 100 science and technology clusters in the world. The city hosts a large part of Turkish football and sports in general, with clubs such as Galatasaray, Fenerbahçe and Beşiktaş. Istanbul is vulnerable to earthquakes as it is in close proximity to the North Anatolian Fault.
