

Have You Seen My Dinosaur

Barney & Friends

with the song "I Love You", sung to the tune of "This Old Man". Despite being a carnivorous type dinosaur, Barney does not have a carnivore's fearsome

Barney & Friends is an American children's television series created by Sheryl Leach targeted at children ages two to five. The flagship production of the Barney franchise, it originally aired on PBS under the PBS Kids brand from April 6, 1992 to November 2, 2010, although new videos were still released on various dates after the last episode aired. It features and stars Barney, an anthropomorphic purple Tyrannosaurus rex who conveys educational messages through songs and small dance routines with a friendly, huggable and optimistic attitude. Reruns aired on Sprout from 2005 to 2015, and from December 17, 2018 to January 25, 2020 on Sprout's successor network, Universal Kids, until the latter's closure on March 6, 2025. On October 6, 2015, the series was initially renewed for revival with a new season to premiere in 2017, but that never came to fruition. A CGI-animated series aired on Cartoon Network's Cartoonito on October 18, 2024, and streamed on Max on October 14, 2024.

While popular with its intended audience, Barney & Friends drew severe negative reaction from adults, who mocked the title character in popular culture through song parodies and comedy routines such as being beaten up by NBA star Charles Barkley on a Saturday Night Live episode.

Dinosaurs in Jurassic Park

of prehistoric animals (mainly non-avian dinosaurs) through ancient DNA extracted from mosquitoes that have been fossilized in amber. The franchise explores

Jurassic Park, later also referred to as Jurassic World, is an American science fiction media franchise. It focuses on the cloning of prehistoric animals (mainly non-avian dinosaurs) through ancient DNA extracted from mosquitoes that have been fossilized in amber. The franchise explores the ethics of cloning and genetic engineering and the morals behind de-extinction, commercialization of science, and animal cruelty.

The franchise began in 1990 with the release of Michael Crichton's novel Jurassic Park. A 1993 film adaptation, also titled Jurassic Park, was directed by Steven Spielberg. Crichton then wrote a sequel novel, The Lost World (1995), and Spielberg directed its film adaptation, The Lost World: Jurassic Park (1997). Additional films have been released since then, including Jurassic Park III in 2001, completing the original trilogy of films.

The fourth installment, Jurassic World, was released in 2015, marking the start of a new trilogy. Its sequel, Jurassic World: Fallen Kingdom, was released in 2018. Jurassic World Dominion, released in 2022, marks the conclusion of the second trilogy. A standalone sequel, Jurassic World Rebirth, was released in 2025. Two Jurassic World short films have also been released: Battle at Big Rock (2019) and a Jurassic World Dominion prologue (2021).

Theropod dinosaurs like Tyrannosaurus and Velociraptor have had major roles throughout the film series. Other species, including Brachiosaurus and Spinosaurus, have also played significant roles. The series has also featured other creatures, such as Mosasaurus and members of the pterosaur group, both commonly misidentified by the public as dinosaurs. The various creatures in the films were created through a combination of animatronics and computer-generated imagery (CGI). For the first three films, the animatronics were created by special-effects artist Stan Winston and his team, while Industrial Light & Magic (ILM) handled the CGI for the entire series. The first film garnered critical acclaim for its innovations

in CGI technology and animatronics. Since Winston's death in 2008, the practical dinosaurs have been created by other artists, including Legacy Effects (Jurassic World), Neal Scanlan (Jurassic World: Fallen Kingdom), and John Nolan (Jurassic World Dominion and Jurassic World Rebirth).

Paleontologist Jack Horner has served as the longtime scientific advisor on the films, and paleontologist Stephen L. Brusatte was also consulted for Jurassic World Dominion and Jurassic World Rebirth. The original film was praised for its modern portrayal of dinosaurs. Horner said that it still contained many inaccuracies, such as not portraying dinosaurs as having colorful feathers, but noted that it was not meant as a documentary. Later films in the series contain inaccuracies as well, for entertainment purposes. This includes the films' velociraptors, which are depicted as being larger than their real-life counterparts. In addition, the franchise's method for cloning dinosaurs has been deemed scientifically implausible for a number of reasons.

Sue (dinosaur)

October 1997 for US\$8.3 million, one of the highest amounts ever paid for a dinosaur fossil. Sue is now a permanent feature at the Field Museum of Natural History

Sue (stylized: SUE), officially designated FMNH PR 2081, is one of the largest, most extensive, and best preserved Tyrannosaurus rex fossils ever found, at over 90 percent recovered by bulk.

FMNH PR 2081 was discovered on August 12, 1990, by American explorer and fossil collector Sue Hendrickson, after whom it is named. After ownership disputes were settled, Sue was auctioned in October 1997 for US\$8.3 million, one of the highest amounts ever paid for a dinosaur fossil. Sue is now a permanent feature at the Field Museum of Natural History in Chicago, Illinois.

Dinosaur Train

are all Pteranodons, takes the Dinosaur Train to explore the Mesozoic, and have adventures with a variety of dinosaurs. It is produced by The Jim Henson

Dinosaur Train is an animated television series aimed at children ages 3 to 6 and created by Craig Bartlett, who also created Nickelodeon's Hey Arnold!. The series features a Tyrannosaurus rex named Buddy who, together with the rest of his family, who are all Pteranodons, takes the Dinosaur Train to explore the Mesozoic, and have adventures with a variety of dinosaurs. It is produced by The Jim Henson Company in association with the Infocomm Media Development Authority (formerly the Media Development Authority), Sparky Animation, FableVision, Snee-Oosh, Inc., Reel FX, and Sea to Sky Entertainment. As of September 2018, PBS Kids had ordered 11 more episodes, taking the total number of episodes to 100. A film based on the series from Universal Pictures and Universal 1440 Entertainment titled, Dinosaur Train: Adventure Island premiered on April 12, 2021.

A revival is currently in the works at the Jim Henson Company.

Moon Girl and Devil Dinosaur

Marvel's Moon Girl and Devil Dinosaur (or simply Moon Girl and Devil Dinosaur) is an American animated superhero comedy television series developed by

Marvel's Moon Girl and Devil Dinosaur (or simply Moon Girl and Devil Dinosaur) is an American animated superhero comedy television series developed by Steve Loter, Jeffrey M. Howard, and Kate Kondell for Disney Channel. Based on Moon Girl And Devil Dinosaur by Marvel Comics, the series follows Lunella Lafayette and her dinosaur companion Devil Dinosaur.

The series features the voices of Diamond White, Fred Tatasciore, Alfre Woodard, Sasheer Zamata, Jermaine Fowler, Gary Anthony Williams, Libe Barer, and Laurence Fishburne. Development began after Marvel

Studios president Louis D'Esposito showed Fishburne the comic book series Moon Girl And Devil Dinosaur. His interest piqued, having been a fan of the original Moon-Boy and Devil Dinosaur, Fishburne sought to make an animated series based on the duo. Production proceeded for two years before Steve Loter was hired as an executive producer. After a successful pitch to Disney Television Animation executives, the series was greenlit and publicly announced in February 2018. It is produced by Cinema Gypsy Productions, Disney Television Animation, and Marvel Animation, with animation by Flying Bark Productions.

In October 2022, ahead of the series premiere, the series was renewed for a second season. Marvel's Moon Girl and Devil Dinosaur premiered on Disney Channel on February 10, 2023, and was released on Disney+ five days later. The series received highly positive reviews for its writing, animation, soundtrack, representation, and characters. The series won five Children's and Family Emmy Awards. The second season premiered on February 2, 2024, with the remaining episodes of the second season premiering on February 6, 2025. A crossover with Spidey and His Amazing Friends, "Moon Girl and the Dino Dilemma", aired on November 15, 2024, with White and Tatasciore reprising their roles.

Dinosaur (2000 film)

Dinosaur is a 2000 American live-action/animated adventure film produced by Walt Disney Feature Animation in association with The Secret Lab, and released

Dinosaur is a 2000 American live-action/animated adventure film produced by Walt Disney Feature Animation in association with The Secret Lab, and released by Walt Disney Pictures. The film was directed by Ralph Zondag and Eric Leighton and produced by Pam Marsden, from a screenplay written by John Harrison, Robert Nelson Jacobs, and Walon Green, and a story by the trio alongside Zondag and Thom Enriquez. It features the voices of D. B. Sweeney, Alfre Woodard, Ossie Davis, Max Casella, Hayden Panettiere, Samuel E. Wright, Julianna Margulies, Peter Siragusa, Joan Plowright, and Della Reese. The story follows a young Iguanodon who was adopted and raised by a family of lemurs on a tropical island. They are forced to the mainland by a catastrophic meteorite impact; setting out to find a new home, they join a herd of dinosaurs heading for the "Nesting Grounds", but must contend with the group's harsh leader, as well as external dangers such as predatory Carnotaurus.

The initial idea was conceived in 1986 by Phil Tippett and Paul Verhoeven, which they conceived as a darker, naturalistic film about dinosaurs. The project underwent numerous iterations with multiple directors attached. In 1994, Walt Disney Feature Animation began development on the project and spent several years developing the software to create the dinosaurs. While the characters in Dinosaur are computer-generated, most of the backgrounds are live-action and were filmed on location. A number of backgrounds were found in various continents such as the Americas and Asia; various tepuis and Angel Falls also appear in the film. With a budget of \$127.5 million, Dinosaur was reportedly the most expensive computer-animated film at the time. Dinosaur is also the first film from Walt Disney Feature Animation to be 3D animated.

Dinosaur was released on May 19, 2000, to mixed-to-positive reviews from critics, who praised the film's opening sequence, soundtrack and animation, but criticized the story and screenplay for its lack of originality. The film grossed \$349.8 million worldwide, becoming the fifth highest-grossing film of 2000. It became the fourth best-selling home video release of 2001, selling 10.6 million copies and garnering \$198 million in sales.

Dinosaurs is an American family sitcom television series that aired on ABC from April 26, 1991 to July 20, 1994. The show, about a family of anthropomorphic dinosaurs, was produced by Michael Jacobs Productions and Jim Henson Television in association with Walt Disney Television and distributed by Buena Vista

International, Inc. The characters were designed by Henson team member Kirk Thatcher.

Beginner Books

I Teach My Dog a Lot of Words written by Michael Frith, illustrated by P. D. Eastman
Big Dog...Little Dog by P. D. Eastman
Are You My Mother? by P

Beginner Books is the Random House imprint for young children ages 3–9, co-founded by Phyllis Cerf with Ted Geisel, more often known as Dr. Seuss, and his wife Helen Palmer Geisel. Their first book was Dr. Seuss's *The Cat in the Hat* (1957), whose title character appears in the brand's logo. Cerf compiled a list of 379 words as the basic vocabulary for young readers, along with another 20 slightly harder "emergency" words. No more than 200 words were taken from that list to write *The Cat in the Hat*. Subsequent books in the series were modeled on the same requirement.

Beginner Books had only four titles in their catalog in 1958. Two years later, they were earning 1 million dollars a year. Random House acquired Beginner Books in 1960 and was the largest publisher of children's books in the United States.

Jurassic World Rebirth

saying, "Once that happened, you can go anywhere in the world and you can have as many crazy dinosaur situations as you want. I was more limited. I find

Jurassic World Rebirth is a 2025 American science fiction action film directed by Gareth Edwards and written by David Koepp. It takes place three years after *Jurassic World Dominion* (2022), and is the fourth *Jurassic World* film as well as the seventh installment overall in the *Jurassic Park* franchise. The film stars Scarlett Johansson, Mahershala Ali, Jonathan Bailey, Rupert Friend, Manuel Garcia-Rulfo, and Ed Skrein. In *Jurassic World Rebirth*, the world's dinosaurs live around the equator, which provides the last viable climate for them to survive. A team travels to a former island research facility where the three largest prehistoric animals reside, with the goal of extracting samples that are vital for a heart disease treatment. The team also rescues a shipwrecked family, and both groups struggle to survive after becoming stranded on the island.

Work on the film began shortly after the release of *Jurassic World Dominion*, when executive producer Steven Spielberg recruited Koepp to help him develop a new installment in the series. Koepp previously co-wrote the original *Jurassic Park* film (1993) and wrote its sequel, *The Lost World: Jurassic Park* (1997). Development of *Rebirth* was first reported in January 2024. Edwards was hired as director a month later, and casting commenced shortly thereafter. Principal photography took place in Thailand, Malta, and the United Kingdom from June to September 2024.

Jurassic World Rebirth premiered on June 17, 2025, at Odeon Luxe Leicester Square in London, and was released in the United States and Canada by Universal Pictures on July 2. The film received mixed reviews from critics, though some deemed it an improvement over previous entries. It has grossed \$846.9 million worldwide against a budget of \$180–\$225 million, making it the fourth-highest-grossing film of 2025.

Jurassic Park

(Attenborough) and a team of genetic scientists have created a wildlife park of de-extinct dinosaurs. When industrial sabotage leads to a catastrophic

Jurassic Park is a 1993 American science fiction action film directed by Steven Spielberg and written by Michael Crichton and David Koepp, based on Crichton's 1990 novel. Starring Sam Neill, Laura Dern, Jeff Goldblum, and Richard Attenborough, the film is set on the fictional island of Isla Nublar near Costa Rica, where wealthy businessman John Hammond (Attenborough) and a team of genetic scientists have created a wildlife park of de-extinct dinosaurs. When industrial sabotage leads to a catastrophic shutdown of the park's

power facilities and security precautions, a small group of visitors struggle to survive and escape the now perilous island.

Before Crichton's novel was published, four studios put in bids for its film rights. With the backing of Universal Pictures, Spielberg acquired the rights for \$1.5 million. Crichton was hired for an additional \$500,000 to adapt the novel for the screen. Koepp wrote the final draft, which left out much of the novel's exposition and violence, while making numerous changes to the characters. Filming took place in California and Hawaii from August to November 1992, and post-production lasted until May 1993, supervised by Spielberg in Poland as he filmed *Schindler's List*. The dinosaurs were created with groundbreaking computer-generated imagery by Industrial Light & Magic, and with life-sized animatronic dinosaurs built by Stan Winston's team. To showcase the film's sound design, which included a mixture of various animal noises for the dinosaur sounds, Spielberg invested in the creation of DTS, a company specializing in digital surround sound formats. The film was backed by an extensive \$65 million marketing campaign, which included licensing deals with over 100 companies.

Jurassic Park premiered on June 9, 1993, at the Uptown Theater in Washington, D.C., and was released two days later throughout the United States. It was a blockbuster hit and went on to gross over \$914 million worldwide in its original theatrical run, surpassing Spielberg's own *E.T. the Extra-Terrestrial* to become the highest-grossing film of all time until the release of *Titanic* (1997), surpassing it in early 1998. The film received critical acclaim, with praise to its special effects, sound design, action sequences, John Williams's score, and Spielberg's direction. The film won 20 awards, including three Academy Awards for technical achievements in visual effects and sound design. Following its 20th anniversary re-release in 2013, *Jurassic Park* became the oldest film in history to surpass \$1 billion in ticket sales and the 17th overall.

In the years since its release, film critics and industry professionals have often cited *Jurassic Park* as one of the greatest summer blockbusters of all time. Its pioneering use of computer-generated imagery is considered to have paved the way for the visual effects practices of modern cinema. In 2018, it was selected for preservation in the United States National Film Registry by the Library of Congress as "culturally, historically, or aesthetically significant". The film spawned a multimedia franchise that includes six sequels, video games, theme park attractions, comic books and various merchandise.
