25 Colors

List of colors: A-F

The following is a list of colors. A number of the color swatches below are taken from domain-specific naming schemes such as X11 or HTML4. RGB values

The following is a list of colors. A number of the color swatches below are taken from domain-specific naming schemes such as X11 or HTML4. RGB values are given for each swatch because such standards are defined in terms of the sRGB color space. It is not possible to accurately convert many of these swatches to CMYK values because of the differing gamuts of the two spaces, but the color management systems built into operating systems and image editing software attempt such conversions as accurately as possible.

The HSV (hue, saturation, value) color space values, also known as HSB (hue, saturation, brightness), and the hex triplets (for HTML web colors) are also given in the following table. Some environments (like Microsoft Excel) reverse the order of bytes in hex color values (i.e. to "BGR"). Colors that appear on the web-safe color palette—which includes the sixteen named colors—are noted. (Those four named colors corresponding to the neutral greys have no hue value, which is effectively ignored—i.e., left blank.)

Web colors

Web colors are colors used in displaying web pages on the World Wide Web; they can be described by way of three methods: a color may be specified as an

Web colors are colors used in displaying web pages on the World Wide Web; they can be described by way of three methods: a color may be specified as an RGB triplet, in hexadecimal format (a hex triplet) or according to its common English name in some cases. A color tool or other graphics software is often used to generate color values. In some uses, hexadecimal color codes are specified with notation using a leading number sign (#). A color is specified according to the intensity of its red, green and blue components, each represented by eight bits. Thus, there are 24 bits used to specify a web color within the sRGB gamut, and 16,777,216 colors that may be so specified.

Colors outside the sRGB gamut can be specified in Cascading Style Sheets by making one or more of the red, green and blue components negative or greater than 100%, so the color space is theoretically an unbounded extrapolation of sRGB similar to scRGB. Specifying a non-sRGB color this way requires the RGB() function call. It is impossible with the hexadecimal syntax (and thus impossible in legacy HTML documents that do not use CSS).

The first versions of Mosaic and Netscape Navigator used the X11 color names as the basis for their color lists, as both started as X Window System applications.

Web colors have an unambiguous colorimetric definition, sRGB, which relates the chromaticities of a particular phosphor set, a given transfer curve, adaptive whitepoint, and viewing conditions. These have been chosen to be similar to many real-world monitors and viewing conditions, to allow rendering to be fairly close to the specified values even without color management. User agents vary in the fidelity with which they represent the specified colors. More advanced user agents use color management to provide better color fidelity; this is particularly important for Web-to-print applications.

Colors TV

now-defunct Colors TV. Amitabh Bachchan served as brand ambassador for the UK and USA launches. Colors launched in the United Kingdom and Ireland on Sky on 25 January

Colors TV is an Indian general entertainment pay television channel owned by JioStar, a joint venture between Viacom18 and Disney India. Its programming consists of family dramas, comedies, fantasy shows, youth-oriented reality shows, shows on crime, and television films.

School colors

School colors, also known as university colors or college colors, are the colors chosen by a school, academy, college, university or institute as part

School colors, also known as university colors or college colors, are the colors chosen by a school, academy, college, university or institute as part of its brand identity, used on building signage, web pages, branded apparel, and the uniforms of sports teams. They can promote connection to the school, known as "school spirit", and help differentiate it from other institutions.

Atari 7800

palette holds 3 colors. The background (visible when not covered by other objects) can also be assigned a color. In total, 25 colors can appear on a scan

The Atari 7800 ProSystem, or simply the Atari 7800, is a home video game console officially released by Atari Corporation in 1986 as the successor to both the Atari 2600 and Atari 5200. It can run almost all Atari 2600 cartridges, making it the first ever video game console with backward compatibility. It shipped with a two button controller instead of the 2600-standard CX40 and Pole Position II as the pack-in game. The European model has a gamepad instead of a joystick. Most of the early releases for the system are ports of 1981–1983 arcade video games. The final wave of 7800 cartridges is closer in style to what was available on other late 1980s consoles, such as Scrapyard Dog and Midnight Mutants.

Designed by General Computer Corporation, the 7800 has graphics hardware similar to early 1980s arcade video games and is a significant improvement over Atari's previous consoles. It uses the same Television Interface Adaptor chip that launched with the Atari VCS in 1977 to generate two-channel audio. In an effort to prevent the flood of poor quality games that contributed to the video game crash of 1983, cartridges had to be digitally signed by Atari.

The Atari 7800 was first announced by Atari, Inc. on May 21, 1984, but a general release was shelved until May 1986 due to the sale of the company. Atari Corporation dropped support for the 7800, along with the 2600 and Atari 8-bit computers, on January 1, 1992.

The Colors Within (Japanese: ????, Hepburn: Kimi no Iro; lit. 'Your Color') is a 2024 Japanese animated drama film. Directed by Naoko Yamada and produced by Science Saru, it was released in Japanese theaters in August 2024.

List of Crayola crayon colors

in 1903, more than 200 colors have been produced in a wide variety of assortments. The table below represents all of the colors found in regular Crayola

Since the introduction of Crayola drawing crayons by Binney & Smith in 1903, more than 200 colors have been produced in a wide variety of assortments. The table below represents all of the colors found in regular Crayola assortments from 1903 to the present. Since the introduction of fluorescent crayons in the 1970s, the standard colors have been complemented by a number of specialty crayon assortments, represented in subsequent tables.

List of colors by shade

This is a lists of colors by shade. Red is any of a number of similar colors evoked by light, consisting predominantly of the longest wavelengths discernible
